

FROM POWER EQUIPMENT COMPANY

Finally, a simple and affordable solution for your standby generator. Now you and your service company can work together to keep your generator running at peak performance.

The Gen-Tracker system is a universal reporting and notification system for standby generators. It is your solution whether you have one generator or thousands, small 8kw or large 2MW, we've got you covered.

Why do I need a monitoring system for my generator?

- Gen-Tracker gives you the ability to be proactive and address problems before an outage
- Receive automated real time email reporting and text messages
- Save on labor costs, no longer manually logging reporting data
- Over 90% of generator failures occur during the regular exercise
- Prevent after hours/emergency rates

Will your generator work when it matters most? Let Power Equipment Company and Gen-Tracker ensure that you won't be left in the dark!

HOW IT WORKS:

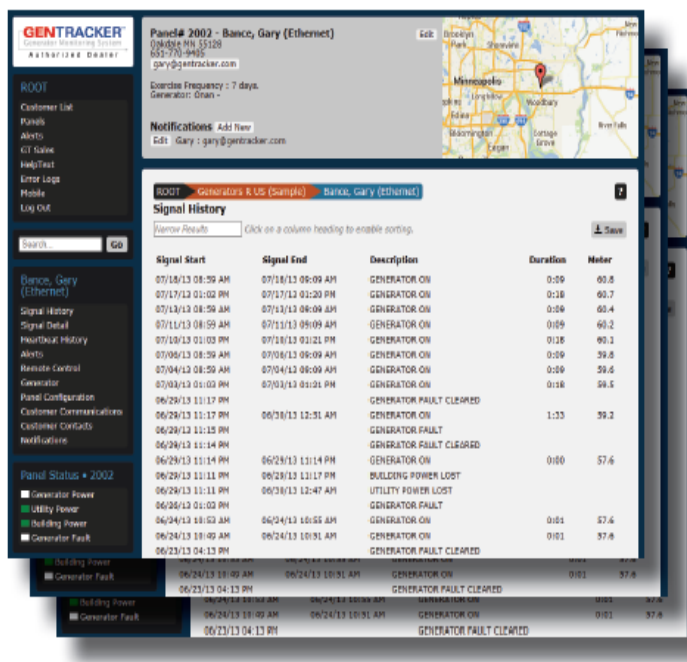

Each Gen-Tracker system is installed at the Automatic Transfer Switch (ATS) or the generator itself and communicates to the Gen-Tracker Data Center which processes and issues notifications and reports to you and to Power Equipment Company.

WEB PORTAL:

Secured and easy to use web portal allows you to see what your generator is doing from anywhere in the world. Manage your notifications and reports, view history summaries and detailed events.

REPORTS:

Available reports include Monthly Activity detailing generator activity including runs, outages and faults. The Run Report is generated at the end of every generator run detailing specific information such as start time, battery cranking voltage and run duration.

INSTALLATION

Power Equipment Company is an authorized Gen-Tracker dealer and will install the system on all generator brands and sizes. Contact us today for more information:
